

Official CCA-F Exam Blueprint

📌 Claude Certified Architect – Foundations

The **CCA-F** certification validates your architectural expertise in orchestrating AI agents, configuring developer workflows, mastering tools, and deploying production-grade Claude applications.

📊 Exam Structure & Format

- **? Questions:** 60 scenario-based questions
- **🕒 Duration:** 120 minutes
- **🎯 Passing Score:** 720 / 1000
- **🧩 Format:** Questions are based on **4 randomly selected scenarios** out of 6 published application scenarios.

5 Official Exam Domains (Part 1)

The CCA-F exam is structured around 5 key technical domains:

Domain 1: Agentic Architecture & Orchestration (27%)

Agent lifecycle, multi-agent coordination, task decomposition, planning strategies, automated retries, and human-in-the-loop patterns.

Domain 2: Claude Code Configuration & Workflows (20%)

CLAUDE.md files, project-level configurations, memory management, slash commands, Claude Code CLI, and dev workflows.

Domain 3: Prompt Engineering & Structured Output (20%)

Prompt design, XML tags structuring, few-shot prompting, schema-enforced JSON outputs, and prompt optimization techniques.

5 Official Exam Domains (Part 2)

Domain 4: Tool Design & MCP Integration (18%)

Model Context Protocol (MCP), tool calling schemas, API integration, resources, authentication, security, and external systems connection.

Domain 5: Context Management & Reliability (15%)

Context window optimization, RAG architectures, multi-turn long conversations, hallucination reduction, model evaluation, and production reliability.

Weight Breakdown Overview

Domain Name	Weight
1. Agentic Architecture & Orchestration	27%
2. Claude Code Configuration & Workflows	20%
3. Prompt Engineering & Structured Output	20%
4. Tool Design & MCP Integration	18%
5. Context Management & Reliability	15%

6 Official Application Scenarios (1-3)

Exam questions assess your architectural decision-making against 6 published real-world scenarios:

1. Customer Support Resolution Agent

Build an AI agent capable of resolving customer support requests using enterprise knowledge bases and external API tools.

2. Code Generation with Claude Code

Architect an AI-powered coding assistant for software development, automated debugging, refactoring, and code review.

3. Multi-Agent Research System

Design multiple collaborating agents that research, analyze, cross-validate, and synthesize complex information.

6 Official Application Scenarios (4-6)

4. Agentic Tool Design

Design and securely integrate tools using Model Context Protocol (MCP) and third-party enterprise APIs.

5. Developer Productivity with Claude

Deploy an AI assistant to streamline technical documentation, automated testing, CI/CD pipelines, and dev workflows.

6. Long Document Processing

Analyze, summarize, extract data, and perform Q&A over massive document repositories using effective context management.

CCA-F Exam Prep Cheat Sheet

📌 Strategy Checklist

- Focus heavily on **Agentic Architecture (27%)** – understand multi-agent systems and task decomposition.
- Master **MCP Integration (18%)** & **CLAUDE.md** configuration.
- Prepare for scenario questions randomly selected from the 6 official application scenarios.
- Practice schema-enforced outputs and XML prompt structuring.
